## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 09-080417 (JP '417). JP '417 discloses a process for producing a color filter comprising the steps of injecting a coloring material from an ink jet device onto selected ITO electrodes formed on a glass substrate while a voltage is impressed on the selected ITO electrodes. See the abstracts. However, JP '417 does not utilize an optical detection system or form a printing frame on the color filter substrate. The examiner takes Official Notice that it is known in the art to utilize an optical detection system to monitor the landing position of ink drops while forming a color filter by ink jet printing, and that it is known to form a printing frame on a substrate so as to separate pixels of different color from one another while forming a color filter by ink jet printing. It would have been obvious to one skilled in the requisite art to utilize an optical detection system and to provide a printing frame on the substrate in the process of forming a color filter of JP '417 because it is known in the art that an optical detection system provides for monitoring the landing position of ink drops while forming a color filter by ink jet printing so as to improve quality, and it is known to form a printing frame on a substrate separating pixels of different color from one another so as to prevent color mixing.

***Pertinent Prior Art***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 2002/060757 discloses a method of manufacturing an active matrix substrate comprising the step of discharging by ink jet printing a mixed ink of coloring material and conductive material to form a conductive color layer, wherein the conductive color layers function as pixel electrodes and color filters.
